

For Parents:

This may be a good tool to use with your children when helping them find equivalent fractions. I haven't given it to them directly as I think it would need some explaining.

Please let me know if I can be of any assistance with this.

# Equivalent Fractions

The multiplication matrix also holds equivalent fractions. For example:

$$\frac{1}{2} = \frac{2}{4} = \frac{4}{8} = \frac{5}{10} = \frac{6}{12} = \frac{7}{14} = \frac{8}{16} = \frac{9}{18} = \frac{10}{20} = \frac{11}{22} = \frac{12}{24}$$

This pattern continues down the grid for  $\frac{2}{3}$  and  $\frac{3}{4}$  etc.
