

# Friday maths

## Fraction instructions

Over the last half term you have learnt so many methods when dealing with fractions. You also wrote some amazing instructions during your literacy lessons.

Time to combine;

I would like you to write sets of instructions for some of the methods we have learnt this half term. Each lesson Mr L has given brief instruction with examples. Can you use your English skill to write a clear set of instructions on how to;

**Add or subtract fractions- same denominator**

**Find equivalent fractions**

**Order fractions**

**Convert improper to mixed number**

**Convert mixed number to improper**

**Simplify fractions**

**Find fractions of a shape**

**Find fractions of amounts**

You do not need to make instructions for all methods, Think about the methods you struggle with, you can revisit the home learning slides or use google to search for any reminders.

Think about clear, numbers steps, using time conjunctions, the correct vocabulary.

You could try to make it into a song, Mr L has a fraction RAP he will share with you when we are back in school!
